

# eSIGNO 2.0 Smart Access

State-of-the-art contactless lock

# eSIGNO 2.0

## Smart Access

CISA eSIGNO 2.0 is the latest addition to CISA's range of security solutions for lodging facilities and community buildings.

The CISA eSIGNO 2.0 lock enhances the **guest experience**, customising and digitalising hospitality services such as the mobile access feature.

### Wireless and mobile

CISA eSIGNO 2.0 is a wireless lock that offers state-of-the-art access control.

In wireless mode, the data generated by CISA eSIGNO 2.0 as it communicates with the remote system are sent to a dashboard, ensuring **smarter building management**.

### Non-invasive installation

The lock is powered by standard, off-the-shelf batteries which guarantee long life and ensure the lock remains fully functional, even in the event of a power failure.

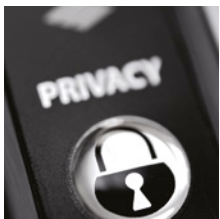

### DPR

When combined with a mechanical lock with the DPR (Door Position Report) function, it offers **greater security** as it traces and records door status and any openings with the mechanical override key.

### Do not disturb

The lock is fitted with a LED "Do not disturb" signal that advises staff when guests are in their rooms.

### Contactless technology

**Users open the door**

**intuitively** by simply holding

the card up to the reader.

This technology eliminates contact, resulting in less wear of parts.

### Cyber security

The CISA eSIGNO 2.0 lock is fitted with **secure**

**element hardware** and is regularly monitored by cyber security experts **to guarantee not only physical but cyber protection**.

### Certifications

CISA eSIGNO 2.0 is suitable for use on fire doors (EN 1634).

It can also be installed on emergency exits when combined with CE EN1125 or EN 179-certified products.

### Design

CISA eSIGNO 2.0 combines the most innovative, superior Italian design with advanced security features. Its **elegant, compact model** meets all mechanical and aesthetic needs, blending in seamlessly wherever it is installed.

### Technical assistance

In addition to its standard warranty, CISA offers **post-warranty modular service contracts** to prevent and correct any issues.

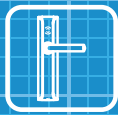

A CISA service contract guarantees optimal maintenance of the security system with periodic

check-ups and rapid emergency response when required.

### Installation service and training

The installation service is designed for customers looking for "turnkey" solutions. CISA engineers set up the entire system: installation, configuration and training, with

maximum professionalism.

# A flexible, modular solution

Depending on the lodging facility's present or future needs, CISA eSIGNO 2.0 can be installed **immediately or retrofitted** without disrupting its basic function: providing guest access to rooms.

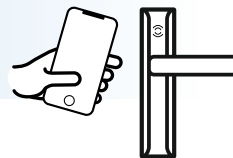

## Standalone mode with contactless cards

Guests can open the door using a traditional contactless card.

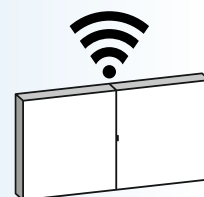

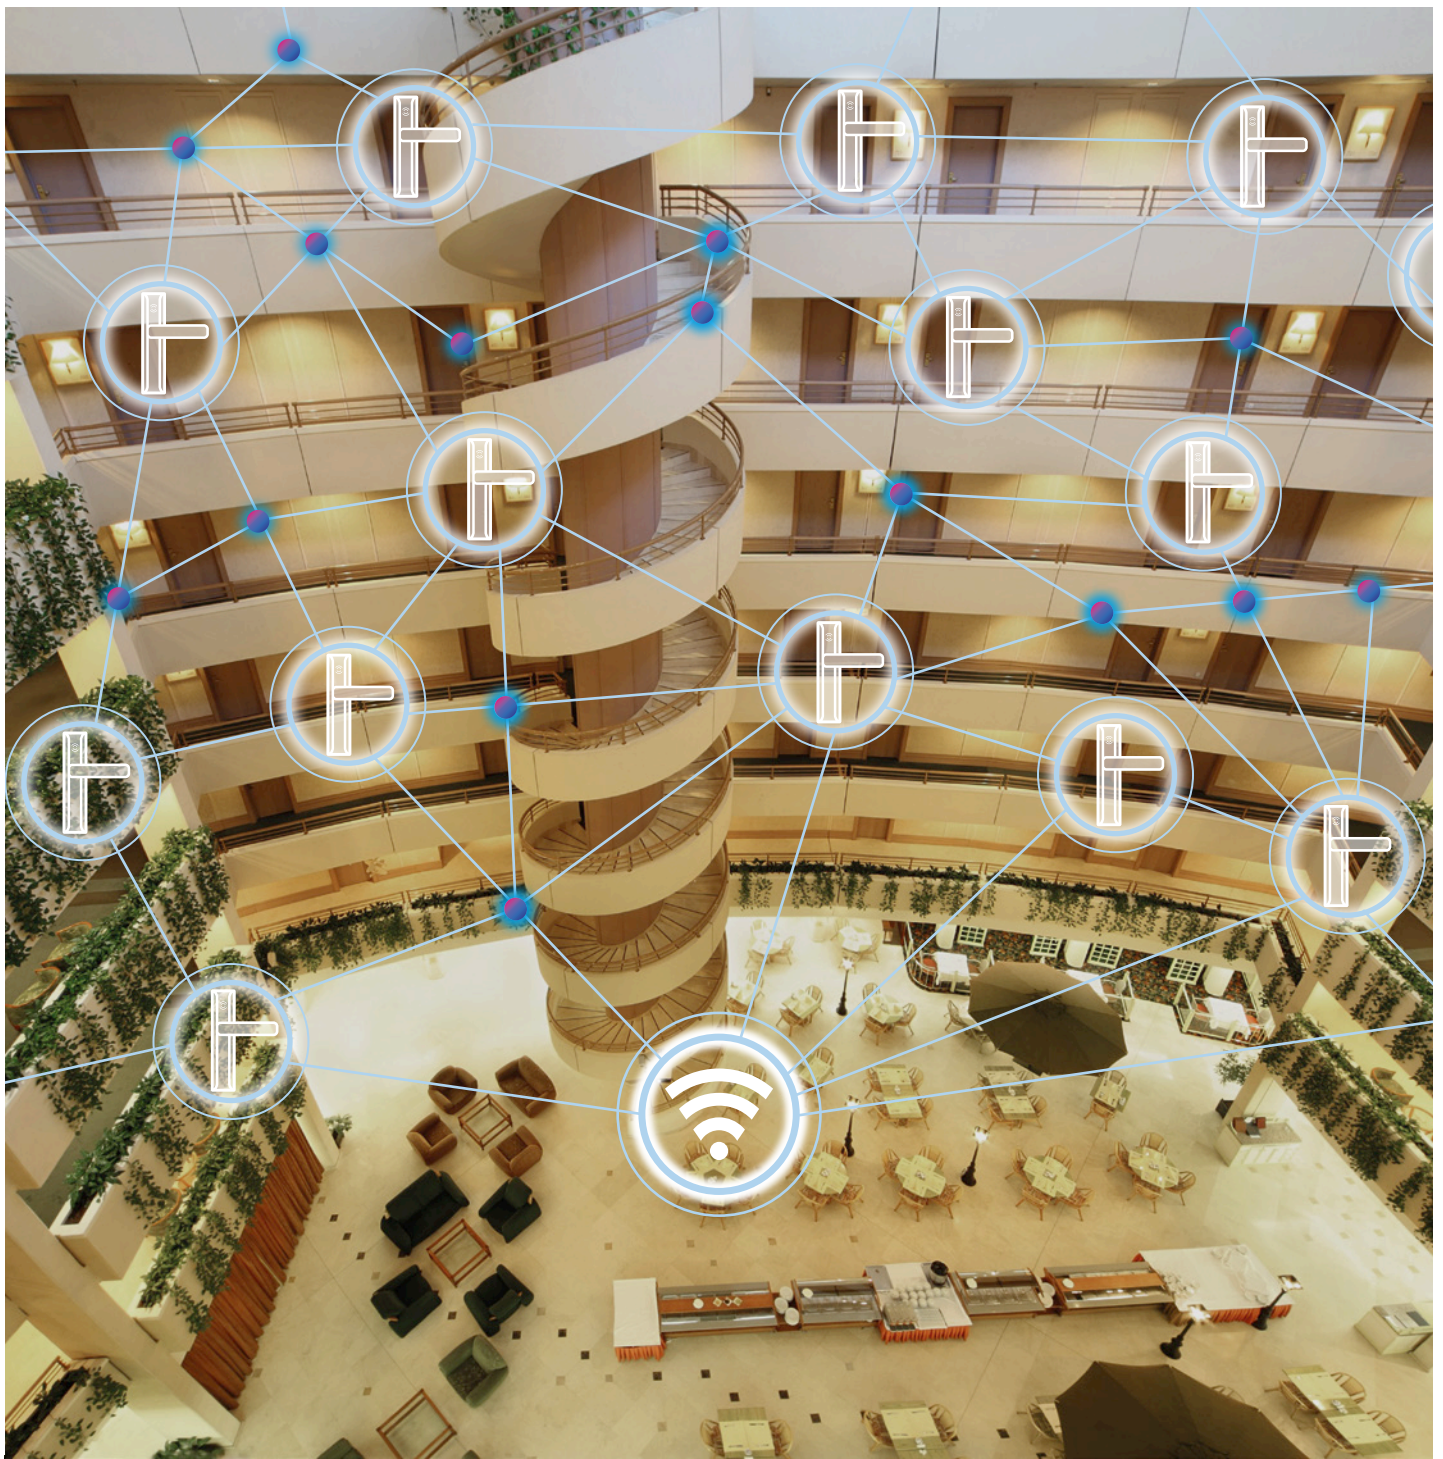

## Mobile credentials

Guests can use their smartphone to access their room via, for example, the CISA Smart Access app. Digital keys can be activated either remotely or at a check-in kiosk, if available, and sent to the guest's smartphone.

## Wireless mode with Bluetooth technology
